4 Cleaning data for analysis

0%

Here, you'll dive into some of the grittier aspects of data cleaning. You'll learn about string manipulation and pattern matching to deal with unstructured data, and then explore techniques to deal with missing or duplicate data. You'll also learn the valuable skill of programmatically checking your data for consistency, which will give you confidence that your code is running correctly and that the results of your analysis are reliable!

Data types	50 xp
	100 xp
Working with numeric data	100 xp
Using regular expressions to clean strings	50 xp
String parsing with regular expressions	100 xp
Extracting numerical values from strings	100 xp
Pattern matching	100 xp
▶ Using functions to clean data	50 xp
Custom functions to clean data	100 xp
	100 xp
Duplicate and missing data	50 xp
Dropping duplicate data	100 xp
Filling missing data	100 xp
▶ Testing with asserts	50 xp
Testing your data with asserts	100 xp
